

LEMON SHARK

Scientific name:
Negaprion brevirostris

Listed as Vulnerable
on the IUCN Red List.

They are social and will spend
time with similar sized friends.

Named for the yellowish color of
their skin which helps them blend in
with the sandy bottom.

They are viviparous, meaning they give birth to live young rather than laying egg cases.
Pups have "belly buttons" (umbilical scar) when they are born.
