

OCEANIC WHITETIP

(Carcharhinus longimanus)

Found globally in offshore tropical and subtropical waters.

Easily recognized by the rounded first dorsal with distinct white tip and long pectoral fins.

Listed as 'Vulnerable' on the IUCN Red List due to overfishing in pelagic fisheries around the world.

They have a gestation period of 9-12 months and only give birth to 5-6 pups.

They feed on barracuda, mahi-mahi, marlin, tuna and mackerel.
