

SHARK FACTS

SPINY DOGFISH

SHARKS4KIDS.COM

Spiny dogfish are small, slender, schooling sharks characterized by **SPINES ON THEIR DORSAL FINS**

Spiny dogfish have a row of **SMALL WHITE SPOTS** that run along each side of the body. These spots fade with growth and even disappear entirely on some individuals.

35-48 in (90-120 cm)

HOW BIG?

Females give birth to live young, with each newborn pup ranging in size from 8-13 inches (20-33 cm) in length. The average size of adult spiny dogfish is 35-48 inches (90-120 cm)

SPINY DOGFISH/SPUR DOG (*Squalus acanthias*)

- ▶ Spiny dogfish are found around the world in coastal, relatively cool waters
- ▶ They got their common name because fishermen commonly noted that they hunt shoals of smaller fish in large dog-like "packs"
- ▶ Spiny dogfish pregnancies are among the longest in the Animal Kingdom. Females carry about six pups for nearly two years (about as long as African elephants)!
