

LEMON SHARK

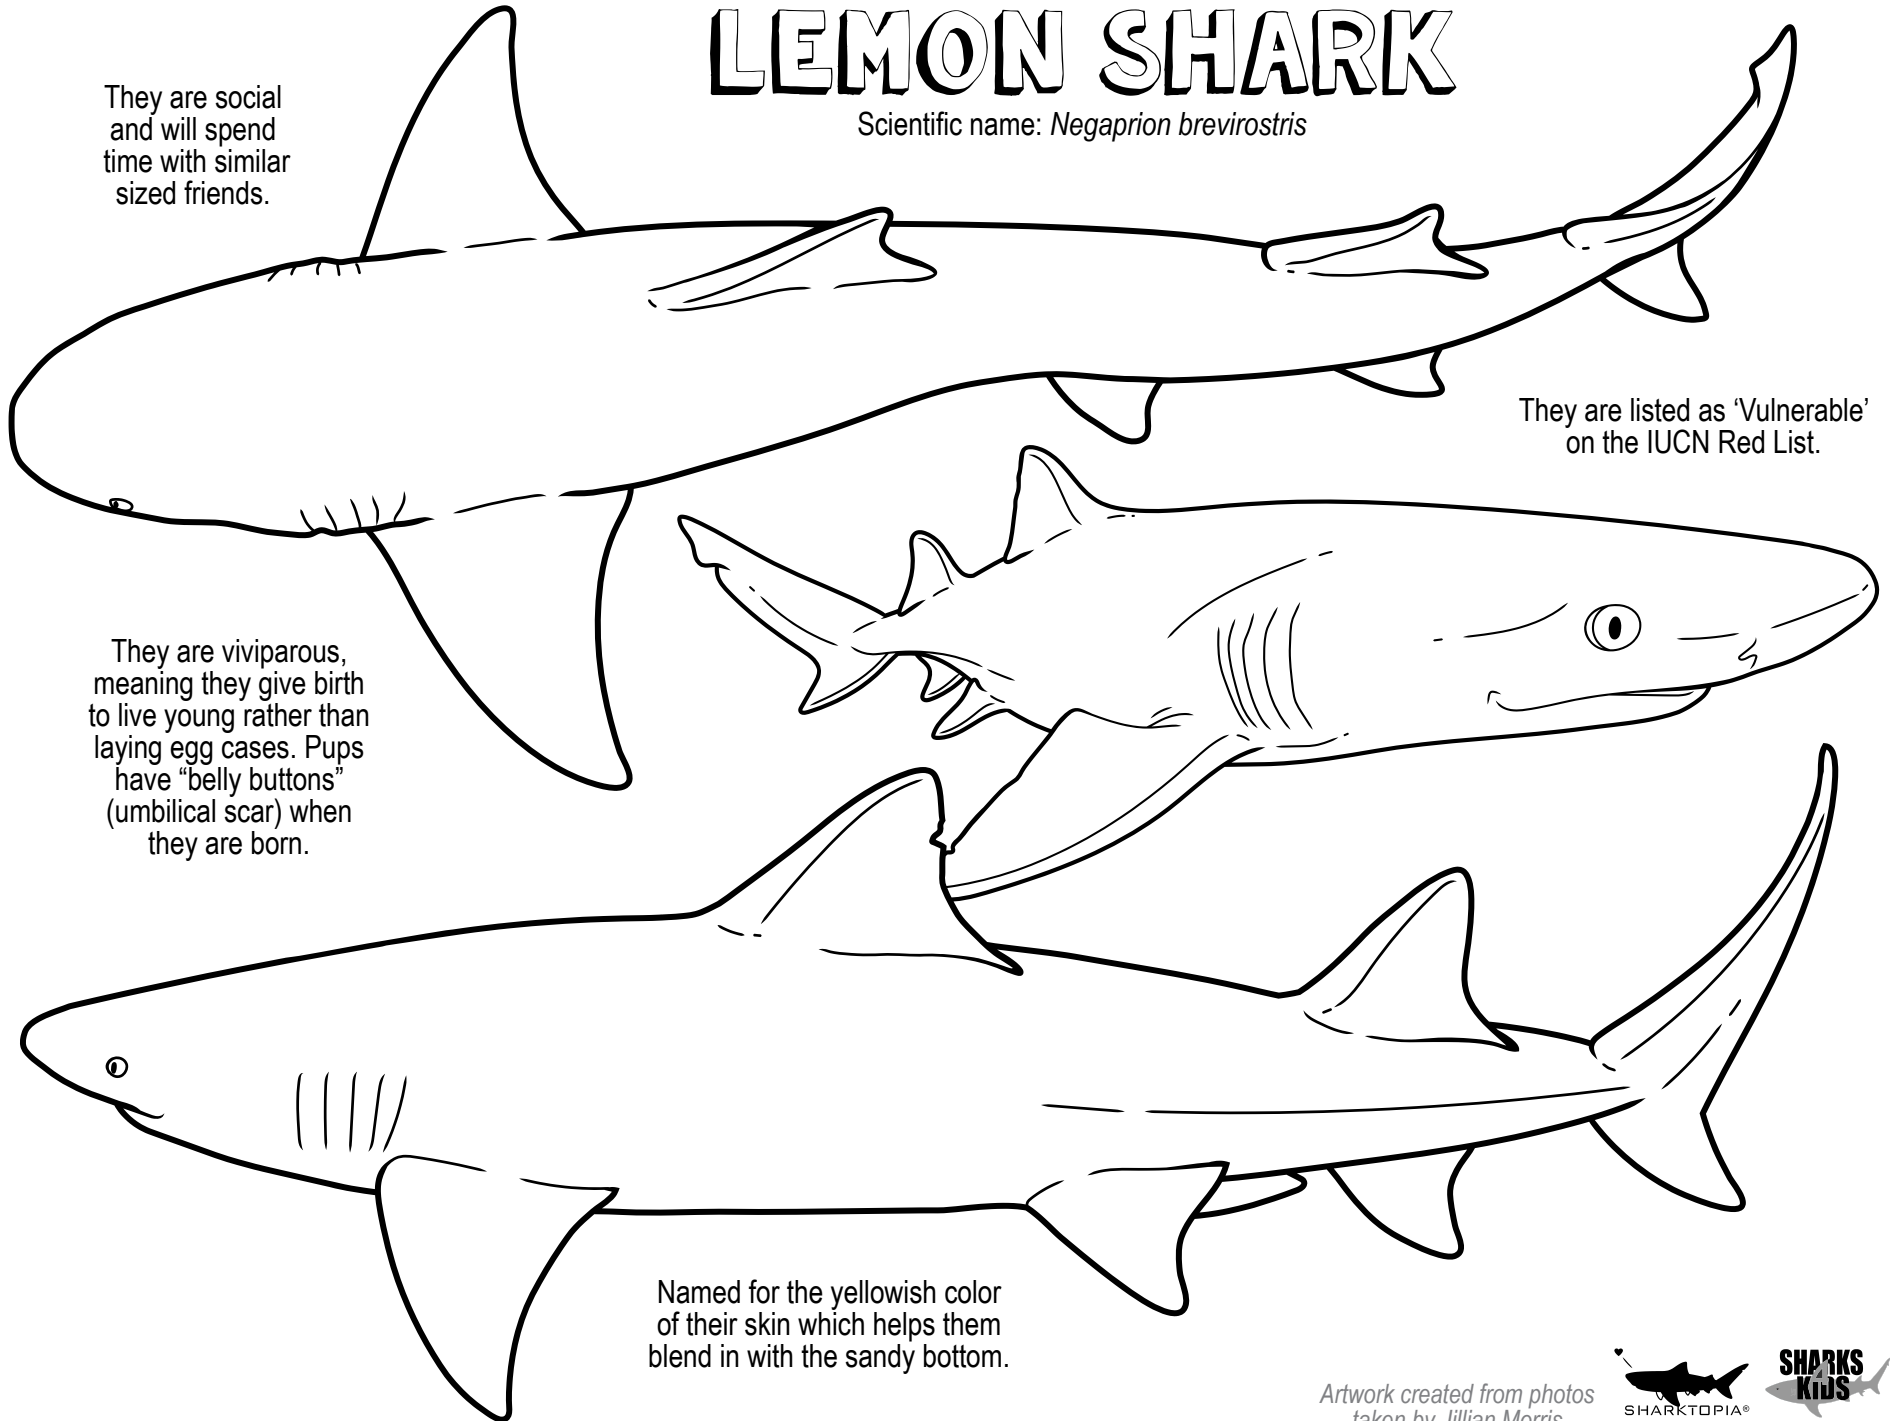

Scientific name: *Negaprion brevirostris*

They are social and will spend time with similar sized friends.

They are listed as 'Vulnerable' on the IUCN Red List.

They are viviparous, meaning they give birth to live young rather than laying egg cases. Pups have "belly buttons" (umbilical scar) when they are born.

Named for the yellowish color of their skin which helps them blend in with the sandy bottom.
